THE SECRETARY OF COMMERCE
Washington, D.C. 20230

Executive Secretary
80-5532

11/18/80

Dear Mr. Turner:

I wish to invite you to participate in the first of a special series of briefings for Chief Executive Officers of major American companies. Our offices have been in touch, and I understand the time has been reserved on your calendar.

These briefings are designed to provide specific information to bolster efforts by American businesses to compete in foreign countries. They stem from an interagency Task Force on Intelligence and the Business Community which recommended that Commerce, closely supported by State, CIA and Treasury establish a high level series of briefings on key foreign countries. Although government participants in the briefing will obviously have full access to intelligence, the briefings are not to divulge classified information. (This letter is classified because the existence of the Task Force, as well as its work and recommendations are SECRET.)

For the first briefing, the Task Force selected high priority major projects in two industrial sectors of China -- non-petroleum energy and mineral resource development. The American companies bidding for projects in these industrial sectors are facing stiff foreign competition. Enclosed is a list of the major projects and industrial sectors and the American companies that have been invited.

The briefing will be held Tuesday, December 9, at the Department of Commerce, from 10:00 a.m. to about 2:30 p.m. An agenda and list of speakers and topics are enclosed. Questions about your participation and presentation should be directed to Mr. David Laux, Director, People's Republic of China Affairs Division, 377-3583.

I am informing the Chief Executive Officers or their representatives that the briefing will be closed to all but invited guests and senior government officials. The briefing will be strictly off-the-record.

Given the relatively small size of the group, I suggest that your presentation be conversational, rather than speech form, and as informative as possible given necessary constraints. I also suggest leaving some time for questions.
